KENDRION SOLUTIONS

Servo Slim Line

Fail-safe spring-applied brake
in a flat and space-saving design

PRECISION. SAFETY. MOTION.

Our brakes - perfect for your safe application

KENDRION Industrial Brakes - this stands for excellent service and smart innovation, which we consistently use for the benefit of our customers:

Strong know-how

Our specialists develop pioneering permanent magnet and spring-applied brakes. On the one hand, they use the bundled know-how in the team; on the other hand, they maintain a dialogue with customers in order to always keep trends and requirements in mind. With INTORQ as a new addition to KENDRION, we have once again consistently expanded our range of spring-applied brakes and clutches for you. So we can find the right solution for every requirement.

Complete product portfolio

Electromagnetic brakes and clutches as well as perfectly matched accessories: With us you will find an exceptionally large selection of quickly available off-the-shelf products that can be put together in a modular system and the best expertise for customer-specific solutions.

Dynamic innovative power

Worldwide, more than 50 specialists in our research and development department work in agile teams to create convincing product solutions for tomorrow.

In-depth market knowledge

We are very familiar with our focus markets - thanks to in-depth experience and research, but also thanks to long-standing customer relationships based on partnership at eye level.

International power

Committed and competent employees, production sites in Germany, United States, India and China as well as a large number of certified sales partners all over the world make us a strong partner for you!

The Servo Slim Line

On the point

- Fail-safe spring-applied brake
- Holding brake with emergency stop function
- A total of 7 different sizes available
- Torque range from 0.27 Nm to 8 Nm
- Standard temperature range from -10°C to $+100^{\circ}\text{C}$

Suitable for the use of:

Robotics & Automation

Automated Guided Vehicles (AGVs)

Medical technology

Maximum safety with minimum space requirements

Safety aspects are crucial issues in robot applications. After all, uncontrolled movements caused by control system or power failure must be avoided to prevent harm or damage to people and property.

For decades Kendrion has been supplying brakes for industrial robots with loads higher than 20 kg. In order to also serve the rapidly growing market for smaller robots, Kendrion has developed the new flat spring-applied brake referred to as “Servo Slim Line”.

Kendrion’s Servo Slim Line flat spring-applied brake is perfectly tailored to the specific requirements in robotics and is designed for applications with payloads of up to about 20 kg. The slim single-disc brakes are flatter and lighter than the market standard in relation to their power density. Owing to their large inside diameter, they are ideal for hollow-shaft drives. These features make them the perfect choice for lightweight robots equipped with incorporated drives.

Ideal for restricted space applications

- Designed for integrated installation in robot joints and hollow-shaft motors
- Simple and versatile installation options
- Variable shaft-hub connection

Technical highlights

- High power density due to patented air gap adjustment
- Guaranteed minimum torque over entire life time
- Slim and space-saving design
- Flexible cable routing
- Fast opening and closing times
- Low weight

Brake types

The two standard brake types – 500 and 502 – have been specially developed for integration into compact hollow-shaft motors. The space-saving design of the Servo Slim Line brakes makes them ideal for applications requiring optimal use of restricted space. Customers are welcome to discuss their specific requirements with us to receive customized solutions.

Brake type 500

Hub with large outside diameter

- Brake can be guided over the hub **only** on the flange side
- Brake mounting possible on the flange and front side
- Suitable for larger shaft diameters (hollow shaft)

Brake type 502

Hub with small outside diameter

- Brake can be guided over the hub on both the flange and the front side
- Brake mounting possible on the flange and front side
- Suitable for small to medium shaft diameters

Hub types

The hub is the connecting element between the motor shaft and the brake. The hubs of the Servo Slim Line offer various options in terms of hub length, hub diameter and keyway design. The hub type can be selected based on the specific installation conditions.

Hub for brake type 500

- Short hub for press-fit connection
- Large outside diameter

Hub for brake type 500

- Short hub with keyway
- Large outside diameter

Hub for brake type 502

- Long hub for press-fit connection
- Small outside diameter
- Special version with set screws available on request

Hub for brake type 502

- Long hub with keyway
- Small outside diameter
- Special version with set screws available on request

Technical details

Product code / Types	SL 500..A00 ; SL 502..A00
Operation mode	Holding brake with emergency stop function
Standard nominal voltage	24 VDC (other ratings available on request)
Protection class	IP00
Thermal class	F (155°C)
Transmittable torque range	0.27 Nm to 8 Nm
Duty cycle	100% ED
Nominal backlash	1°
Ambient temperature	-10°C to +100°C
Note	The general information on specification sheets and the relevant operating instructions must be observed. Subject to change without notice.

Brake size	Brake type		Min. transmittable torque ¹⁾	Nominal power	Max. rotation speed ²⁾	Max. emergency stop rotation speed	Maximum switching energy per ES (Z=1)	Number of emergency stops	Switching times		Max. inertia friction disc incl. hub	Max. weight brake incl. hub
									Closing time ³⁾	Opening time

Customized solutions – tailored exactly to your needs

Automation solutions have become an indispensable part of industry and everyday life. In this context, it is often the brakes that ensure safety: They hold loads and brake reliably in an emergency.

Just as automation continues to evolve, brakes must also face higher demands – forward-looking products are in demand. At the same time, quality and safety must be unconditionally guaranteed. This is a challenge that Kendrion Industrial Brakes meets with passion and care.

When it comes to developing customer-specific solutions, we have three aces up our sleeves:

- With our **new agile organization**, we respond much faster to customer requests.
- Our **modularly developed products** enable new configurations without complete redevelopment.
- The **global structure of our organization** bundles competencies and ensures valuable knowledge transfer.

This makes us a competent and reliable partner for our customers – starting with industry-savvy consulting, through product development with practical experience, to uncompromising quality assurance.

We will find the
solution that suits
you best!
