

Simplaflex

Torsionally flexible shaft coupling

Highly elastic and resistant to extreme temperature fluctuations.

The Simplaflex is a maintenance-free all-steel coupling. The spring package makes it extremely flexible for optimum compensation of shaft misalignments. Thanks to their compact and rotationally symmetric structure, Simplaflex couplings can also be used in applications operating at high rotational speeds.

Highlights

- Compensates for shaft misalignments axially - radially - angularly
- Range of use from -40 °C to +100 °C, in individual cases up to +300 °C
- Rated torque up to 900 Nm
- Maintenance-free
- Large number of different variants; also available as a rust-free model

Simplaflex

Torsionally flexible shaft coupling

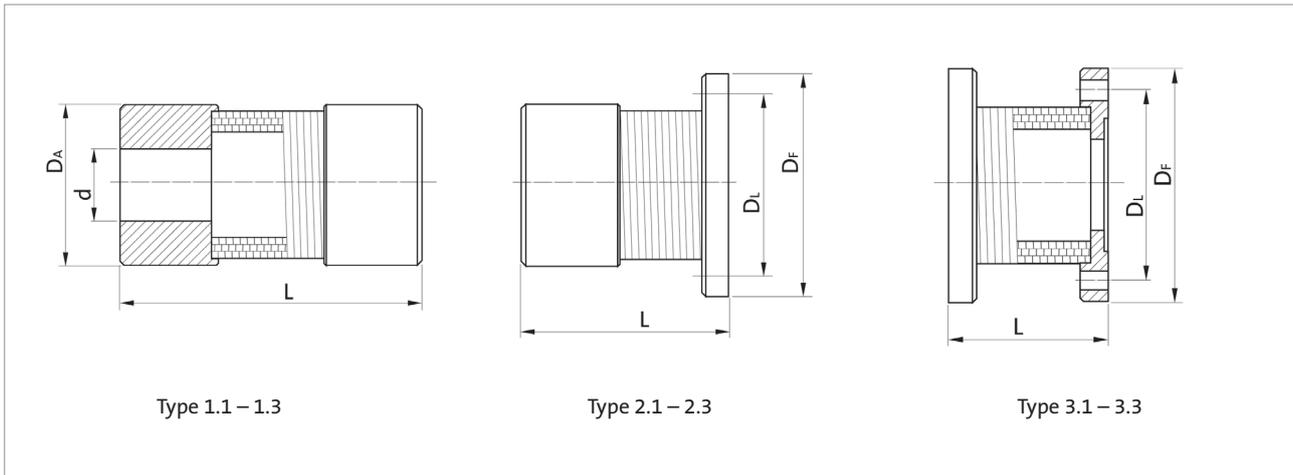

Structure/function

The Simplaflex consists of a triple-layered spring bellow with square cross-sections.

Misalignments are very effectively absorbed and compensated for by the springs. The springs are connected to the body of the shaft by hubs and a flange.

The different types of this coupling can be supplied in three lengths: x.1 / x.2 / x.3.

In addition to the standard version, we also supply the Simplaflex with a clamping hub for backlash-free torque transmission or with a sliding hub for high axial displacement.
